

## CASE STUDY

Project: **Birmingham Airport Bussing Lounge**  
 Client: **Birmingham Airport**  
 Value: **£1.7m**  
 Location: **Birmingham**

All aspects of project delivery were exceptional and Site Manager Sean kept his site to a high standard. There was a great team effort between Shaylor Group and the airport throughout the works."

**Sacha Singh,**  
**Birmingham Airport**

Working airside in the Restricted Zone at Birmingham Airport, we were appointed to deliver a new bussing lounge. The project incorporated the fully co-ordinated design of M&E services including PA and ICT systems, air conditioning, fire sprinklers, lifts, escalators and security systems. We also installed new curtain walling, vehicle protection barriers, a new toilet block facility, steel staircase and gate desk. Delivering the project in a secure environment, General Security Awareness Training (GSAT) tests were completed by all staff including our supply chain members in line with EU legislation. The project was delivered in a fully occupied and operational building which was in use by both staff and passengers 24/7.

**Building a Better Future**
